

Q- How to copy by value a composite data type (array+object)?

1. Use the spread (...) syntax
2. Use the Object.assign() method
3. Use the JSON.stringify() method and JSON.parse() method

for example:-

```
const person = {  
  FirstName: 'John',  
  LastName: 'Doe'  
};
```

//using spread ... method

```
let p1={  
  ...person  
};
```

//using Object.assign() method

```
let p2= Object.assign({},person);
```

//using JSON method

```
let p3= JSON.parse(JSON.stringify(person));
```
